I'm starting the AWS Networking Series!

Roshan Shrestha

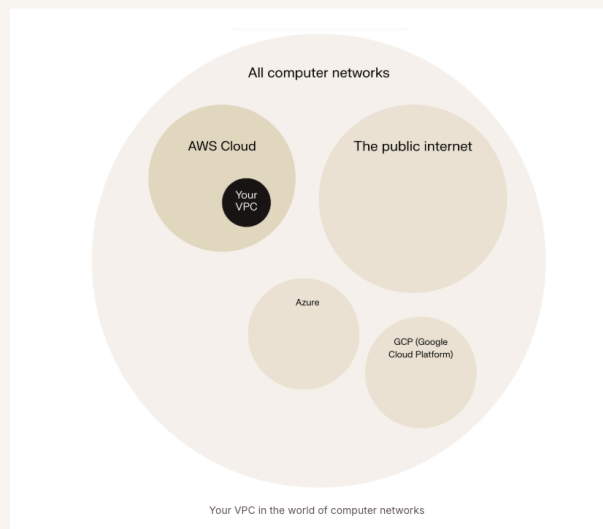

I'm building a cloud networking architecture

In this hands-on networking series, I'm learning about AWS Networking. By the end of the 9 projects, I will have hands on knowledge on VPCs. I'm learning about cloud networking because I'm interested in the topic.

Businesses traditionally had to build their own physical networks. Cloud networking changed things by creating a shared system that everyone could use.

Excited to share my progress - build a VPC with me!

I will set aside 4 hours every week to work on this networking series. I will keep myself accountable by writing down my progress. My reward is food.

What are networks?

Computer networks are a system of computers and devices that enables them to communicate with each other and share data.

What is a VPC?

A VPC is a private section of the Amazon network. This helps organizations by allowing them to control the traffic flow within their private section and its resources.
